### Book Descriptions:

We have made it easy for you to find a PDF Ebooks without any digging. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with 8140.43 manual . To get started finding 8140.43 manual , you are right to find our website which has a comprehensive collection of manuals listed.

Our library is the biggest of these that have literally hundreds of thousands of different products represented.

## Book Descriptions:

### 8140.43 manual

Put the air manifold 10 appropriately to one side in the engine bay. Take out the side soundproofing cover if any and the top cover 11. Remove the injectors 17 or 13, the fuel recovery pipe 16 and the fuel pipes 15. For engine 8140.43C, take out the screws 18 securing the injector brackets and remove the injectors from the cylinder head. For engine 8140.63, unscrew the injectors 13. Put the transverse air manifold 10 appropriately to one side in the engine bay. Remove the top 11 and side if any soundproofing covers. Remove the timing cover 6. Turn the crankshaft so as to align the camshaft pulley mark A with the tappet cover mark B, making it possible to insert tool 99360608 into the hole 5 in the pulley and into the hole in the auxiliary member assembly. If this is not possible, turn the crankshaft by one turn. Remove the pipe bracket for the oil dipstick 7 from the auxiliary member assembly. Disconnect the following from the injection pump D 12, EGR potentiometer if present; Turn the engine in the opposite direction to that of rotation until the injection pump timing piston reaches TDC, indicated by the dial gauge 3. Zero the dial gauge 3. Insert tool 99360608 5 into the hole In the above condition, marks A and B Figure 17 must coincide and the injection pump piston must have made the required travel. If this is not so, turn the pump body in its slot to obtain the required value shown by the dial gauge. Fully lock the nuts securing the pump to the auxiliary member assembly. This deactivates the KSB device. From the engine bay, take out the nuts securing the injection pump and remove the pump. Preload the dial gauge 99395603 3 by approx. 3 mm. Key the injection pump onto the auxiliary member assembly, making the groove 2, obtained in the pump drive shaft, with the protrusion 1 of the coupling. Screw down the nuts securing the pump without fully locking them. Cut off supply to the KSB device.<http://www.detonacao.com.br/specialbrazil/fotos/caldera-tahitian-owners-manual.xml>

- **8140.43 manual, sofim 8140.43 manual, iveco 8140.43 manual, 8140.43 manual.**

Remove tool 99395100 2, Figure 18 and screw the plug back onto the closing screw. Finish mounting the parts removed, following the reverse order to disassembly. Mark its assembly position on its mounting. Position engine flywheel 13 on output shaft to fit tool pin 11 into flywheel milling and secure the fastening screws. Tighten flywheel fastening screws to the required torque. Refit injector as specified in engine overhaul. Fit tool 99395100 8 including the dial gauge 99395603 9 on injection pump 7 after removing the plug; preload and set the dial gauge to zero. Otherwise reset it to dial gauge zero position. Refit.
